```
gel. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is TGAGAGAGCC. This library was created for the University of Iowa Mouse Brain Molecular Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."

Sequence 3, Application US/10135689
Patent No. 6670162
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: THEREOF
TITLE OF INVENTION: THEREOF
TITLE OF INVENTION: THEREOF
TITLE REFERENCE: THEREOF
FILE REFERENCE: CL0009040IV
CURRENT APPLICATION NUMBER: US/10/135,689
CURRENT FILING DATE: 2002-05-01
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES TITLE OF INVENTION: THEREOF FILE REFERENCE: CL000904
CURRENT APPLICATION NUMBER: US/09/729,995
CURRENT FILING DATE: 2000-12-06
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3180 CTGCTCCCAGCCCGGCCTACACCTCTCAGCAAGCTTTCCCTACAGGAGCGCCAGCA 3239

Patent No. 6500938

GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:
ADDRESSEE INCYTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
STREET: ALLO ALTO
STREET: CALIFORNIA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ZIP: 94304

```
The invention relates to an isolated peptide designated human kinase

(HK), that has homology to members of the calcium/calmodulin-dependent

protein kinase kinase subfamily. The mechanism of action of the protein

of the invention is that of a kinase modulator. The human kinase of the

creating a disease or condition mediated by the human kinase. HK is also

treating a disease or condition mediated by the human kinase. HK is also

useful to provide a target for diagnosing a disease or predisposition to

disease mediated by HK, and is also useful in pharmacogenic analysis. HK

creating to treating a disorder characterised by absence of

inappropriate or unwanted expression of HK, also as an immunogen to raise

antibodies by administering HK to a mammalian organism e.g. rat, rabbit

or mouse. Nucleic acids of the invention are useful as hybridisation

probes for mRNA, transcript/conNA and genomic DNA. Recombinant host cells

expressing a native HK are useful for assaying compounds that stimmlate

cor inhibit HK function. Nucleic acids of the invention are also useful

for producing transgenic animals. Experimental data indicates that kinase

cor inhibit the gressent invention are expressed in humans in the eye

fretinoblastomas) and brain. The current sequence represents cDNA

cording the human kinase of the invention
a disease or predisposition to the disease mediated by the peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2190 BP; 457 A; 655 C; 708 G; 370 T; 0 U; 0 Other;

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, lymphoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis, a growth and developmental disorder (e.g. bursitis, cirrhosis, hepatitis, psoriasis, Cushing's syndrome), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarcinon), and a liphid disorder (e.g., fatty liver, cholestasis, Gaucher's disease, Niemann-Pick's disease, PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating knockin humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting cell ferences in the chromosomal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as hybridisation to probes for mapping naturally occurring genomic sequences. PKIN is useful cell contern analysis, dot blot or other membrane-based technologies, in PCR technologies, in dipstick, pin, multiformat enzyme conterns or conterns partients to detect altered PKIN expression. The sequence is human PKIN-19 cDNA

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-600 ABZ12106) or their mature protein coding portion, active domain coding praction, active domain coding praction, active domain coding praction or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABE6890-ABE68949) are useful as molecular weight markers as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellopidisorders (cancer), neurodegenerative diseases (Parkinson's proliferative disorders (cancer), neurodegenerative diseases (Parkinson's diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GCAGCCATCGATGTGACTCACTTGGAGGAGGCAGATGGTGGCCCAGAGCCTACTAGAAAC 120

                                                                                                                                                                                                                                                                                                                                                      This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharamaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX97008-ABX97185 are cDNA fragments amplified and isolated by the PCR primers and probes represented in ABX13460-ABX13462 and ABX97186-ABX65041-ABX65218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        420

The invention relates to an isolated human kinase polypeptide encoded by the DNAs designated 16658, 14223 and 16002 included are a host cell comprision to be monologues and allelic variants. Also included are a host cell comprising the monologues and allelic variants. Also included are a host cell comprising the novel kinase, and recovering the protein, detectively binds to the novel kinase, and recovering the protein, detecting the presence of the DNA in a sample comprising contacting the sample with a compound which selectively hybridises to the DNA and determining whether the compound has bound and identifying compounds which bind to and/or modulate the protein comprising contacting the protein with a test compound and determining whether the compound has bound to and/or modulated the function of the protein (the modulators may be a samall molecule, a peptide, a phosphopeptide, an antibody or a fragment of the full length protein). The nucleic acids, proteins, identified modulators and antibodies are useful in the diagnosis, monitoring and treatment of a wide range of diseases and disorders (many examples of which are listed in the protein protein and brasely and promoters advantaged to the listed in the diagnosis. of the lung and breast, carcinomas, tumours, adenocarcinomas, haematopoietic neoplastic disorders e.g. leukaemias and lymphomas), brain and nerve tissue disorders (e.g. cerebral ischaemia, infections such as meningitis, brain abscess, acquirted immundeficiency syndrome (AIDS)-related myopathy, prion diseases, Alzheimer's disease, Parkinson's disease, Huntington's disease and motor neurone disease) metabolic disorders (e.g obesity, anorexia nervosa and diabetes) pain disorders (e.g. associated with infection, inflammation ischaemia, irritable bowel syndrome), heart disorders (e.g. myocardial infarction), blood vessel New human transferase protein for diagnosing and treating disorders e.g. cancer, Alzheimer's disease, anorexia, diabetes and to identify Claim 1; Fig 16; 143pp; English. modulators for therapeutic use.

AASO6701-AASO6757 encode for novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polynucleotides or serine/threonine kinase (PTK and STK) families. The polynucleotides or serine/threonine kinase (PTK and STK) families. The polynucleotides or serine/threonine kinase and the polypeptides may be used in the prevention, diagnosis and treatment of disease associated with the amorphy propriate kinase expression. For example, they may be used to treat cancers (especially cancers of the amount of disease associated with the cancers of actions of the amount of disease (e.g. atherosclerosis), metabolic disorders (e.g. diabetes), inflammatory disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. asthma), infectious disease (e.g. HIV) and reproductive disorders (e.g. infertility).

Additionally, polynucleotides encoding protein kinases may be used as antigens in the production of antibodies against the protein kinase sand in assays to identify modulators of protein kinase expression and activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

The invention relates to novel human kinase proteins (PKIN) and nucleic acid molecules encoding them. PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its cDNA are useful for diagnosis, prevention and treatment of immune disorders such as acquired immune prevention and treatment of immune disorders such as acquired immune distress syndrome (AIDS), Addison's disease, anaemia, autorimmune thyroiditis, multiple sclerosis, asthma, asteoasthrifis, osteoarthrifis, osteoarthrifis, osteoarthrifis, orderative colitis and diabetes mellitus; growth and developmental disorders such as actinic keratosis, arteriosclerosis, atherosclerosis, burstits, cirrhosis, cancers such as adenocarcinoma and leukaemia, cardiovascular diseases such as adenocarcinoma and leukaemia, cardiovascular diseases such as myocardial infarction and hypertension, and lipid disorders such as myocardial infarction and hypertension, and lipid disorders such as grounders and regulatory elements, for creating knock in or knock out in humanised animals or transgenic animals to model human disease and for somatic or germline gene therapy for treating the above
             Human kinase; PKIN-2; therapy; immune disorder; Addison's disease; AIDS; acquired immune deficiency syndrome; growth and developmental disorder; arteriosclerosis; mixed connective tissue disease; MCTD; adenocarcinoma;

NOVX polypeptides and polynucleotides, useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g., cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial

cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX97008-ABX97185 are cDNA fragments amplified and isolated by the PCR primers and probes represented in ABX13460-ABX13462 and ABX97186-ABX97088-ABX97185 encode the NOVX proteins described in ABX97186-ABX97088-ABX97185. This invention describes novel human NOVX polypeptides which have

activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atheoscalerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX97108-ABX97185 are cDNA fragments amplified and isolated by the PCR primers and probes represented in ABX13460-ABX13462 and ABX97186-ABX97008-ABX97185 encode the NOVX proteins described in ABX05041-ABU65218
